By Jesse Jones If you want to be smarter, specially with your money, this book is a must read. If you are in buisness then you need to this book. the auther starts with simple interest and odds and the such and works his way into annuity and calculating mortgage payments. Each chapter esplains an idea and at the end there are probloms for you to work out. Don't know how to work one of the problems? no problem, he works each one out for you, step by step. almost the whole book uses the compounding tables in the back, but you have to use compounding tables unless you know trigonometry. Or you can get a financial calculator, then you would still need this book so you can learn how to use the formulas on the calculator. Whether you own a business or a 401k, you NEED to work through this book. This will give you a great foundation.

Written in a lighthearted and humorous style, this comprehensive guide is ideal for the general reader with little math experience who wants to understand the concepts underlying everyday financial decisions. Organized for easy reference, this book provides the necessary tools to make informed decisions about investments, mortgages, insurance, cash flow, and risk-taking. "As Robert L. Hershey points out in his new book, 'All the Math You Need to Get Rich: Thinking With Numbers for Financial Success' . . . none of us can afford to maintain a phobia about math." . . . I highly recommend Hershey's book because he uses examples . . . to walk you through the many different mathematical equations you'll need to understand such concepts as percentages, the time value of money, and compound interest." . . . As Hershey says, 'Thinking with numbers helps you to plan ahead, so you'll have money now and money later, too.'"mdash;Michelle Singletary, Washington Post, February 10, 2002

"I highly recommend Hershey's book because he uses examples...to walk you through...everything from percentages to compound interest." -- Washington Post, February 10, 2002
