A. Yuengert : Approximating Prudence: Aristotelian Practical Wisdom and Economic Models of Choice (Perspectives from Social Economics) before purchasing it in order to gage whether or not it would be worth my time, and all praised Approximating Prudence: Aristotelian Practical Wisdom and Economic Models of Choice (Perspectives from Social Economics):

In a unique undertaking, Andrew Yuengert explores and describes the limits to the economic model of the human being, providing an alternative account of human choice, to which economic models can be compared.

"Yuengert's wide ranging and excellent book, *Approximating Prudence*, will stimulate further thinking among economists working to formalise Aristotelian approaches. It is a helpful book for philosophers and theologians looking to understand the approach of economists. Working economists will become wiser economists from Yuengert's careful drawing of the limits of economic analysis." - Paul Oslington, professor of Economics, Australian Catholic University

"Yuengert provides a much-needed assessment of both the proper role and the limits of economic analysis in explaining social phenomena. This book is a welcome addition to the literature on the interface of economics and other disciplines." - Albino Barrera, professor of Economics and Theology, Providence College

"Andrew Yuengert explains to economists why their models will never be able to capture the complexity of human decision making and to humanists how recent developments in economics have moved those models significantly closer to that unattainable goal. Deeply appreciative of both worlds, he speaks persuasively to each group in its own language. A brilliant contribution toward bridging a very old chasm of misunderstanding." - Daniel Finn, William E. and Virginia Clemens Professor of Economics the Liberal Arts, College of Saint Benedict, Saint John's University

"In his exciting new volume, *Approximating Prudence: Aristotelian Practical Wisdom and Economics Models of Choice*, Andrew Yuengert manages the rare feat of taking both economics and Aristotelian philosophy seriously. By embedding economic models of choice in the broader Aristotelian account of practical reason, Yuengert offers an illuminating account of what choice theory can and cannot do. Yuengert's tour de force is an exemplar of the creative and careful scholarship that truly valuable interdisciplinary research requires, and should be of particular value to economists seeking to understand how their discipline intersects with larger philosophical concerns." - Mary Hirschfeld, assistant Professor of Economics and Theology, Villanova University

About the Author ANDREW YUENGERT is a Professor of Economics at Seaver College, Pepperdine University, USA. Professor Yuengert has made research contributions in several fields: economic philosophy, Catholic social teaching, the empirical study of religion, labour economics, and finance. He was recently editor of the journal *Faith Economics*. He is the author of two previous books: *The Boundaries of Technique: Ordering Positive and Normative Concerns in Economic Research* (2004), and *Inhabiting the Land: A Case for the Right to Migrate* (2004). His most recent essay is 'Roman Catholic Economics,' in *The Oxford Handbook of Christianity and Economics* (2012). He and his wife Elizabeth have three children, and live in Southern California.
