**From Routledge :** Collaboration across Health Research and Medical Care: Healthy Collaboration before purchasing it in order to gage whether or not it would be worth my time, and all praised Collaboration across Health Research and Medical Care: Healthy Collaboration:

Health research and health care practice are radically transforming as governments invest more in large scale, national

and international health projects with increasing levels of interdisciplinarity as populations age and as nations grow wealthier. This volume examines the structures and dynamics of scientific collaboration in health research and health care. Bringing together detailed research from the US, Canada, Europe and Japan, *Collaboration Across Health Research and Medical Care* sheds light on the features, environments and relationships that characterise collaboration in health care and research, exploring changing patterns of collaboration and examining the causes and consequences of team work in the health domain. With attention to the increasingly porous boundaries between health care and research, the book not only investigates research settings, but also considers the manner in which knowledge produced in laboratories and clinics is translated into day-to-day medical and care practice and health initiatives. It offers a rich examination of the political, technical and organisational facets of collaboration and the implications of changes in collaboration for every day treatment and practice, *Collaboration Across Health Research and Medical Care* will be of interest to scholars of sociology and science and technology studies, as well as those working in the field of health policy and research.

'Rather than an uncritical celebration of interdisciplinarity, the contributions to this volume shed light on how people and things actually collaborate and travel in and between different disciplines and domains. This book makes for great reading, particularly for those of us who the current veneration of "big data" medicine leaves wanting a more sober and fine-grained analysis of changing practices in health and medicine.' Barbara Prainsack, King's College London, UK  
About the Author  
Bart Penders is an assistant professor in Biomedicine and Society in the Department of Health, Ethics and Society at Maastricht University, the Netherlands. He is co-editor of *Collaboration in the New Life Sciences*. Niki Vermeulen is Lecturer in the History and Sociology of Science at the University of Edinburgh, UK, and co-editor of *Collaboration in the New Life Sciences* and *Bio-Objects: Life in the 21st Century*. John N. Parker is an Honors Faculty Fellow at Barrett, The Honors College at Arizona State University. He is co-editor of *Collaboration in the New Life Sciences*.
