If you're thinking of entering the tech industry, you need to read this (along with a book like "Cracking the Coding Interview" or "Programming Interviews Exposed"), as it'll change your perspective on where

you want to work and how to think about your career. If you're in the industry and not already at a top-tier tech company (FB, Google) you should also read it: it could help you land the next job or (possibly even better) help you improve the company you're already at. 3 of 3 people found the following review helpful. A must-read! By Yousef AlSalem I've been searching lately for a book about tech startups until I got my hands on this MASTERPIECE! Jim has done a great job in explaining the main aspects of tech startups in a great way. I highly recommend this book for anyone who is interested in starting a tech business or working for a startup. Jim also has a solid career and experience in this field. 2 of 2 people found the following review helpful. Amazing book... By Sergio Cabral I just finished reading this book and I must say that if you're thinking on joining or starting a #startup, if you just want to know what #startups are all about or just get general advice on how to plan and develop your professional software developer career then this is a must read. What an amazing book! I'm definitely starting my own blog now. Thanks Yevgeniy!!!

This book is the "Hello, World" tutorial for building products, technologies, and teams in a startup environment. It's based on the experiences of the author, Yevgeniy (Jim) Brikman, as well as interviews with programmers from some of the most successful startups of the last decade, including Google, Facebook, LinkedIn, Twitter, GitHub, Stripe, Instagram, AdMob, Pinterest, and many others. Hello, Startup is a practical, how-to guide that consists of three parts: Products, Technologies, and Teams. Although at its core, this is a book for programmers, by programmers, only Part II (Technologies) is significantly technical, while the rest should be accessible to technical and non-technical audiences alike. If you're at all interested in startups—whether you're a programmer at the beginning of your career, a seasoned developer bored with large company politics, or a manager looking to motivate your engineers—this book is for you.

"I wish I'd had a book like this when I was getting my start in the industry." - Jay Kreps, CEO, Confluent Inc
