Michael I sincerely wish had understood these concepts 30 years ago (banging head against wall, ahh!, oaky, now I feel better)...This book presents them quite clear terms an alternative way of saving and investing for the future and getting out of financial trouble that you have now. In the last 50 years, everyone has pretty much invested in real estate and mutual funds or put CDs at banks. Before that, many more Americans understood the value of dividend paying whole life insurance as an investment vehicle, savings, and retirement planning. It's a powerful concept--you can take a loan on your policy and yet the policy continues to earn interest as if the money was not being taken out at all. I am in the process of implementing these strategies for my family and I sincerely hope many will begin to understand the concepts presented here.

A "new" approach worth serious consideration By Hugh N Very interesting, engaging, and persuasive presentation of a surprising way of looking at safe wealth building, insurance, and credit. It's all about putting yourself back into the driver's seat of your finances. This advice runs directly counter to what "they" tell us about saving for retirement, building our wealth, and managing personal and business credit. So far, the only guys I see getting seriously wealthy and bailed out of their mistakes are the banks and brokerage houses that peddle the conventional advice. They have not made me much money, but have made themselves fabulously wealthy. They make most of the profits, virtually guaranteed, while I take all the risk. This is another way, and it's worth serious consideration. And the funny thing is that it's not really new at all - it's very much like what our grandparents did. I am not quite ready to turn over all of my life savings, but I am following up with a Bank on Yourself Advisor to learn more.

New York Times bestseller Do you know what your retirement account will be worth on the day you plan to tap into it? Do you know what the tax rates will be for the rest of your life? Do you know how long you're going to live? Most people have no clue...and that's the problem with conventional financial planning: It's based on things you can't predict or control. Wall Street lost more than 49% of the typical investor's money ndash; twice ndash; since the year 2000. And studies show that because they followed the conventional wisdom, almost half of all Boomers won't have enough money to cover even basic living expenses during their retirement years. Now the financial gurus whose advice got you into this mess in the first place are telling you to "take more risk," "work till you drop," and "plan on spending less in retirement." Don't let them fool you again!
