Helpful information on investing under disaster conditions. While most people do not want to profit from another person's misery, money will be made addressing the aftermath and righting the situation or preventing disasters. For example the rebuilding after Sandy. This book gives you some possible companies that will benefit from changing global conditions such as global warming.

I thought the book was interesting. It is a pretty easy read, really intended for more beginner investors so if you want to stay away complicated graphs formulas then this would be a book you would want to read. I've always been fascinated by apocalyptic events and I help people with their finances so maybe that is why I thought this was an interesting book. If you enjoy investing then give it a read.
